ABSTRACT OF THE DISCLOSURE

An image selecting apparatus comprises an input unit 20, an A/D converter 30, a memory 40, a control unit 50, a recording

5 unit 90, and an output unit 92. The input unit 20 continuously photographs a subject and inputs the data of the images. The A/D converter 30 converts the analog signal of the images received from the input unit 20 to digital signals. The memory 40 stores a plurality of images output from the input unit 20. The control

10 unit 50 selects a desired image from the plurality of images stored in the memory 40. The recording unit 90 records the selected desired image and the output unit 92 outputs the selected desired image.
